Message from the General Chair p. xiii
Message from the Program Committee Co-Chairs p. xiv
Program Committee p. xv
Conference Technical Committee p. xvii
Additional Reviewers p. xviii

Keynote
I'm Mad as Hell and I'm Not Going to Maintain This Anymore

Slicing
A Post-Placement Side-Effect Removal Algorithm p. 2
Union Slices for Program Maintenance p. 12
Evaluating Context-Sensitive Slicing and Chopping p. 22

OO Program Analysis
Using Dynamic Information for the Iterative Recovery of Collaborations and Roles p. 34
ICBMC: An Improved Cohesion Measure for Classes p. 44
Static and Dynamic C++ Code Analysis for the Recovery of the Object Diagram p. 54

Lehman's Laws of Software Evolution, in Context
Panel Introduction p. 66

The Principle of Organizational Maturity and E-Type Dynamics p. 68
Implications of Software Measurement to Lehman's Eight Laws p. 69
Laws and Principles of Evolution p. 70
Laws of Software Evolution and Their Empirical Support p. 71

Empirical Studies
Applicability of IEEE Maintenance Process for Corrective Maintenance p. 74
Outsourcing--An Empirical Study

Two Controlled Experiments Concerning the Usefulness of Assertions as a Means for Programming p. 84
An Approach to Classify Software Maintenance Requests p. 93
An Empirical Study of Distributed Software Maintenance p. 103

Process
Behavioural Concern Modelling for Software Change Tasks p. 112
An Estimation-Based Management Framework for Enhance Maintenance in Commercial Software Products p. 122
An Application Server to Support Online Evolution p. 131
The Information Gathering Strategies of Software Maintainers p. 141

Tools
Tool Support for Measuring Complexity in Heterogeneous Object-Oriented Software p. 152
Constraining Software Evolution p. 162
Columbus--Reverse Engineering Tool and Schema for C++ p. 172
Architecture Analysis Tools to Support Evolution of Large Industrial Systems p. 182
Regression Testing
Maintaining Software with a Security Perspective p. 194
Modeling the Cost-Benefits Tradeoffs for Regression Testing Techniques p. 204
Model Based Regression Test Reduction Using Dependence Analysis

Short Papers

Software Evolution from a Time-Series Perspective

Documenting Pattern Use in Java Programs

Early Effort Estimation of Massive Maintenance Processes

An Integrated Failure Detection and Fault Correction Model

Run-time Evolution for Embedded Component-Oriented Systems

How Should Software Evolution and Maintenance be Taught?

Panel Introduction

Keynote

Steering the Pyramids: Tools, Technology, and Process in Engineering at Microsoft

Impact Analysis

Automating Impact Analysis and Regression Test Selection Based on UML Designs

Path Profile-Based Dynamic Impact Analysis

Software Change Impacts--An Evolving Perspective

Incremental Location of Combined Features for Large-Scale Programs

Industrial Track Session I1

Test Manager: The Test Automation Component for the Maintenance of Large-Scale Systems

Evolutionary Testing Supported by Slicing and Transformation

Transforming Procedural Program Structures to Object-Oriented Class Structures for the Purpose of Populating a Common Software Repository

Business Compilers: Towards Supporting a Highly Re-Configurable Architectural Style for Service-Oriented Architecture

Web Reengineering

Restructuring Multilingual Web Sites

Using Service Specific Proxies to Migrate Web Services to the "Wireless Web": An Illustrative Case Study of Adaptive Maintenance

Testing Web Applications

From Legacy to Web through Interaction Modeling

Program Comprehension

Program Comprehension by Visualization in Contexts

Recovering Conceptual Roles of Data in a Program

An Algorithm to Compare OO-Conceptual Schemas

A Model for Understanding Software Components

Software Metrics

Measuring Software Functional Size: Towards an Effective Measurement of Complexity

Impact Analysis

A Novel Approach to Measuring Class Cohesion Based on Dependence Analysis

Combining Software Quality Predictive Models: An Evolutionary Approach

Testing and Testability
Identifying Test-Critical Dependencies p. 404
A Table Reduction Approach for Software Structure Testing p. 414
Testability Analysis for Software Components p. 422
Putting Escape Analysis to Work for Software Testing p. 430
Models and Evolution
A Case Study of Unanticipated Incremental Change p. 442
The Impact of Environmental Evolution on Requirements Changes p. 452
STA--A Conceptual Model for System Evolution p. 462
Remote Software Maintenance and Repair of Space Vehicles
Panel Introduction p. 470
Maintenance Issues for Very Long-Lived Robotic Space Systems p. 471
PhD Dissertation Section
Software Evolution, Volatility and Lifecycle Maintenance Patterns: A Longitudinal Analysis p. 474
Atomic Architectural Component Recovery for Program Understanding and Evolution p. 478
Change-Oriented Requirements Traceability: Support for Evolution of Embedded Systems p. 482
Corrective Maintenance Maturity Model: Problem Management p. 486
Configuration Management
A Tool for Subsystem Configuration Management p. 492
Consistency Management in the Presence of Simultaneous Client-Specific Views p. 501
Extensible Language-Aware Merging p. 511
A Fine-Grained Version and Configuration Model in Analysis and Design p. 521
Reengineering
Migration to Object Oriented Platforms: A State Transformation Approach p. 530
Maintenance of Object Oriented Systems through Re-Engineering: A Case Study p. 540
Pretty-Printing for Software Reengineering p. 550
An Effective Approach to Reduce the "Avalanche Effect" in the Management of Fiscal Data in Local Public Administration p. 560
Industrial Track Session 12
Release Planning p. 570
Driving Software Quality at a Silicon Valley High-Tech Software Company p. 571
Case Study on Software Engineering Practices with Parnas Tables p. 572
Re-Engineering of E-commerce Legacy Applications for Enterprise Java Environment p. 573
Source Code Manipulation
A Quantitative Evaluation of Maintainability Enhancement by Refactoring p. 576
Constructing Precise Object Relation Diagrams p. 586
A Software Transformation Framework for Quality-Driven Object-Oriented Re-engineering p. 596
Formal Models
A Formal Approach for Software Maintenance p. 608
Approximate Retrieval of Incomplete and Formal Specifications Applied to Vertical Reuse p. 618
Externalizing Component Manners to Achieve Greater Maintainability through a Highly Re-Configurable Architectural Style

Distributed Systems

Using Execution Trace Data to Improve Distributed Systems
A Technique for Dynamic Updating of Java Software
Maintenance of Distributed Systems with Mobile Agents
